Tina - yes, please pass it along to him. We are reviewing the Feasibility Study now & this may be helpful.

Thanks,

Gary Miller

Gary,

I received the email below and wasn't sure if this was something EPA would be interested in or not. I was going to respond to him to let him know that DSHS does not do waste removal or destruction but I didn't know if you wanted him to have your contact info or not. Let me know if you want me to give him your contact info or if you would rather I didn't.

Tina

Subject: San Jacinto TCDD

Dear Ms. Walker,

I just read the article concerning the dioxin contamination at the San Jacinto Waste Pit site (http://www.yourhoustonnews.com/spring/news/harris-county-s-billion-dollar-san-jacinto-river-dioxin-lawsuit/article_d8e354f2-377b-11e3-82eb-001a4bcf887a.html).

I'm not sure if you've ever considered incineration for the higher level PCDD's, but our facility is licensed to accept any level of dioxin regardless of RCRA waste code...including F-listed dioxins.

A facility in Quebec Canada may seem like the other end of the world...but with the advances in rail transportation we are able to transport and incinerate soils all across North America very cost effectively.

If you have dioxin impacted material at the site which may not be suitable to be placed under a cap...I would greatly appreciate the opportunity to provide your remedial contractor with a quotation for such

9493958

services.

Could you get back to me on this when you have a moment?

Kind regards.

Bill Eaton
